

4010 Envelope - Outbound

Revised: July 21, 1998

Functional Group ID=

Introduction:

The purpose of this standard is to define the control structures for the electronic interchange of one or more encoded business transactions including the EDI (Electronic Data Interchange) encoded transactions of Accredited Standards Committee X12. This standard provides the interchange envelope of a header and trailer for the electronic interchange through a data transmission, and it provides a structure to acknowledge the receipt and processing of this envelope.

The interchange control structure is common to all transaction sets.

Receiver's Qualifier ID

>>	ISA08	I07	Interchange Receiver ID	M AN 15/15
			Identification code published by the receiver of the data; When sending, it is used by the sender as their sending ID, thus other parties sending to them will use this as a receiving ID to route data to them	
			<i>Receiver's ID</i>	
>>	ISA09	I08	Interchange Date	M DT 6/6
			Date of the interchange	
>>	ISA10	I09	Interchange Time	M TM 4/4
			Time of the interchange	
>>	ISA11	I10	Interchange Control Standards Identifier	M ID 1/1
			Code to identify the agency responsible for the control standard used by the message that is enclosed by the interchange header and trailer	
			U U.S. EDI Community of ASC X12, TDCC, and UCS	
>>	ISA12	I11	Interchange Control Version Number	M ID 5/5
			This version number covers the interchange control segments	
			00401 Draft Standards for Trial Use Approved for Publication by ASC X12 Procedures Review Board through October 1997	
>>	ISA13	I12	Interchange Control Number	M N0 9/9
			A control number assigned by the interchange sender	
>>	ISA14	I13	Acknowledgment Requested	M ID 1/1
			Code sent by the sender to request an interchange acknowledgment (TA1)

			T Test Data	
>>	ISA16	I15	Component Element Separator	M AN 1/1
			Type is not applicable; the component element separator is a delimiter and not a data element; this field provides the delimiter used to separate component data elements within a composite data structure; this value must be different than the data element separator and the segment terminator

Segment: **GS** Functional Group Header
Position: 020
Loop:
Level:
Usage: Mandatory
Max Use: 1
Purpose: To indicate the beginning of a functional group and to provide control information
Syntax Notes:
Semantic Notes:

- 1 GS04 is the group date.
 - 2 GS05 is the group time.
 - 3 The data interchange control number GS06 in this header must be identical to the same data element in the associated functional group trailer, GE02.
- Comments:** 1 A functional group of related transaction sets, within the scope of X12 standards, consists of a collection of similar transaction sets enclosed by a functional group header and a functional group trailer.

Purpose: To indicate the end of a functional group and to provide control information
Syntax Notes:
Semantic Notes: 1 The data interchange control number GE02 in this trailer must be identical to the same data element in the associated functional group header, GS06.
Comments: 1 The use of identical data interchange control numbers in the associated functional group header and trailer is designed to maximize functional group integrity. The control number is the same as that used in the corresponding header.
